

# Would you like Solar Energy on our building ?

## Information Open House

Monday December 8, 2014 5:30—7:30 PM  
Strata Office, 909 Pembroke Lobby

- Central Park has a large flat unshaded roof with easy access to the boiler and electrical rooms. This makes it a good candidate for solar panels—either Solar Hot Water to collect heat energy, or Photo-Voltaic to collect electrical energy.

- Either of these could be installed for a cost of under \$1,000 per strata suite, would collect free energy from the sun, and reduce our energy bills for many years.

- These technologies are proven, reliable, and used all over the world.

This Open House is a chance for owners to find out more about the options, discuss, and let us know what you think.

Please drop by

**No decisions will be made at this session.**

Bruce Mackenzie, Strata President

Installing any solar system would be a capital project, which must be approved by 3/4 of the owners at a strata General Meeting.
